TeleBill
VALUE BEYOND BILLING

Cobalt is another key element in the TeleBill® solution suite. It is a powerful back office software platform that is switching platform independent, highly scalable and very modular. Available as either a turnkey or ASP product, Cobalt will provide immediate benefits to your telecommunication operations by allowing you to better manage the cost side of the business.

Fully integrated, it features enhancements like easy uploads of carrier rate decks, unified output of mediated CDR, LCR file generation for your switches, and margin reporting for your carrier and customer traffic. Cobalt does all the hard work for you, allowing you to focus on what's really important – your business.

Here are the key elements of Cobalt:

**LCR /Routing management for all US and international destinations** – Supporting multiple switches and business products or business units by balancing QoS and Least Cost, exception routing, time of day, percent routing as well as settlement/volume relationships with alarms and routing utilization across multiple routing plans.

**Automatic Supplier cost/calling code entry** – Quickly update supplier costs/codes in native format, determine Intelligent LCR placement by destination and routing plan, identify new codes for inclusion in master code table and update the supplier costing for validating and margin analysis.

**TeleBill**
VALUE BEYOND BILLING

fax - 585.388.3376

www.TeleBill.com

**Supplier cost validation** – Produce the expected supplier bill in the naming convention and destination breakouts of the specific supplier with adjustments for billing durations and time zone comparisons to actual bill. Identify areas of possible dispute and have supporting documentation.

**Code management** – Keep the master destination code list fully up to date on all supplier codes and determine opportunities/problems associated with code definitions and recommended groupings.

**Real time reports (financial/operational)** – Easily gather traffic, QoS, margin and other key reports by customer, by supplier by any route and timeframe. Traffic is alarmed so as to monitor changes in MOUs, ASR and deposits. Reports are designed for senior team, analysts and technical support within your organization.

**CDR mediation** – Process any number of different types of CDRs into a common format.

**Portal access** – Allows client access to customers and suppliers to view MOUs, Call Counts, ASR, ALOC, and more.

**Special Agreements** – A tool that allows the users to manage, alert and report on agreements such as Bilaterals, Volume Commitments, Revenue Commitments, and Tier Pricing.

**About TeleBill®:** Since 1985, TeleBill® has been a leading provider of telecommunctions billing, LCR, and carrier reconciliation products and services. Led by a team of industry

TeleBill
VALUE BEYOND BILLING

veterans, we work hand in hand with our clients to fully understand their needs in order to optimize their TeleBill® solution.
